The cited document 1 discloses that, when USB series B type special receptacle connectors of USB devices are connected to USB series B type special plug connectors of a cable, a control signal is generated for controlling a switching controller to change the USB devices from device function to USB host function, then two USB device connected together. Whereas, the cited document 1 does not discloses a switch provided between audio output and USB connector as claimed in the invention, which performs both functions of audio outputting and USB connection.

The cited document 2 discloses a system for the flexible connection between a mobile telephone and peripheral devices, such as digital camera, through existing earphone jack. Said system implements the two functions of data transmission and audio outputting using the earphone jack. However, said system does not provide a solution to perform data transmission with USB connection.

The cited document 3 discloses a multi adapter for providing convenient connection between the sound card jack and USB connection jack in the computer and the audio peripheral apparatus and USB peripheral apparatus outside the computer. The cited document 3 forms a switch on the housing of said adapter, and arranges said USB connector and audio jack (including speaker hole, microphone hole, earphone hole) on different sides of the adapter, respectively. Said switch selects different functions of different jacks. The USB connector and audio jack in the cited document 3 are still conventional jack form, and said switch is switching between the existing jacks. In the invention, however, a uniform jack is provided, and said switch is switching between the circuitry for audio outputting and USB connection. As set forth above, none of the cited document 1, 2 and 3 disclose the invention. Accordingly the invention complies with Art 33.
